1. Are you a practicing nurse in a medical facility?

Yes No

Test plan

All the tasks and questions from your test.

Save as template

Introduction

You're going to view a web application dashboard for a nurse call system. Please provide feedback on the information displayed.

Tasks

- Are you a practicing nurse? If not, please do not continue the test. If so, verbally describe your current nurse call system and any software used to track activity. What do you like or dislike about it? [Verbal response]
- Launch URL: <https://www.figma.com/proto/yAMqyODA2atKiO2Y7hOXiB/RTHS-User-Testing?page-id=0%3A1&type=design&node-id=1-12912&viewport=1975%2C-285%2C0.25&t=ZQziwZqoMJuhXbmZ-1&scaling=scale-down&starting-point-node-id=1%3A12912&mode=design>
Once the new page fully loads, move on to the next step.
- View the information displayed on the dashboard and answer the following questions while speaking aloud:
 - What are your impressions of the information displayed as far as value and priority?
 - Is there anything that should be included?
 - Is there anything that should be excluded or deprioritized?
- Click anywhere on the screen that is not highlighted.
 - What is your impression of the "Code Blue" notification?
 - How do you typically receive alarms and notifications relating to patients?
 - What are the most common alarms?Click "Dismiss" to dismiss and return to the main dashboard.
- View all the card titles i.e. "Plugout calls", etc.
 - Is there any terminology that is inappropriate and/or confusing? [Verbal response]
- Click the "Compare" button on the bottom right of the "Ward Workload" card.
 - Verbalize your thoughts on functionality and usability of this screen.
 - How do you imagine the chart visualization changes when you change options on the left?
- Click the "<" icon beside top title to go back to main dashboard. Find and click on the notifications icon.
 - Verbalize your thoughts regarding the clarity and usefulness of notifications.
 - What is the purpose of the "Snooze" button and how would you use it?Click outside the notifications to close the notifications panel.
- Find and click on the icon to print screen.
 - Would it be useful in your daily role to share the screen via email?
 - Is there any improvement or an additional method of sharing you can suggest?
- Launch URL: <https://www.figma.com/proto/yAMqyODA2atKiO2Y7hOXiB/RTHS-User-Testing?page-id=0%3A1&type=design&node-id=1-16401&viewport=1975%2C-285%2C0.25&t=ZQziwZqoMJuhXbmZ-1&scaling=scale-down&starting-point-node-id=1%3A16401&mode=design>
Once the new page fully loads, move on to the next step.
- View the information displayed on the dashboard and verbalize thoughts regarding layout and usefulness of information.
 - Is there anything you would suggest to improve the usefulness of this screen?

ascom

Benefits for carers, patients and residents...

Secure messaging and alert management help optimize care quality and staff responses. Integrates with other clinical data systems such as care management and EPROM, Less staff capture and share clinical data at the point of care.

...and for IT efficiency...

Brings IP to individual rooms for operational continuity. Runs on and integrates with existing IT networks. Allows flexible configuration and remote management. Easily scalable to match changing needs.

...and for managerial and regulatory insights

Automatically logs key operational data such as bed occupancy rates and response times to help optimize care delivery and patient/resident satisfaction. Integrates with existing systems to gather and access data needed for regulatory compliance—in a single facility or across a group. Ascom features a 40% reduction in the time it takes to respond to individual calls that might call. It will help keep residents mobile and give them increased confidence and the sense of self-worth that is so important.

Three Things Hospitals Can Do To Relieve The Nursing Shortage

Ascom has a long history of helping hospitals and healthcare providers to manage their nursing workforce. In the past, this was done through manual methods. Today, with the help of Ascom, hospitals can do three things to relieve the nursing shortage:

1. Automate the process of assigning nurses to patients.
2. Provide real-time data on nurse workload and patient needs.
3. Offer flexible scheduling options for nurses.

Caretronic
SINCE 1942

Nurse Call Systems for Hospitals & Clinics

Caretronic's Nurse Call Systems are designed to meet the needs of hospitals and clinics. They offer a range of features and options to suit different budgets and requirements. The systems are easy to install and use, and they provide reliable service for many years.

Streamline Healthcare Communications With Jeron Nurse Call

With our Provider® 750, Provider® 700, Provider® 680 and Pro-Alert™ 570 technologies, you can streamline your nursing workflow and increase patient satisfaction in any healthcare facility.

Whether you're looking for communication solutions for Acute Care, Skilled Care, Critical Access Hospitals, ASC or an entire integrated delivery network, our systems will provide the support you need.

Healthcare facilities that optimize staff efficiency, accessibility, staff mobility and availability are using Jeron's Provider Nurse Call technology. This turnkey solution for alerting, communications, workflow, and safety is designed with VoIP technology and simple touchscreen operation, making it easy for everyone to use. Not only does Provider Nurse Call Systems support nurses in hospitals and acute care facilities, but it also assists clinics and ASCs. As a result, nurses can easily manage their patients and staff workflow to ensure less crowded waiting rooms, more productivity, fewer errors, and happier patients.

- Most advanced technology to ensure that patient calls are quickly routed to the right staff members.
- Can be integrated with a wide range of other systems, including the patient and clinical communication systems.
- Highly customizable and can be configured to meet the needs of all healthcare facilities.
- Provides real-time data and analytics that can be used to improve patient care and staff efficiency.
- Patients can easily use the system to call for help and assistance, ensuring a faster response time.
