

Honeywell's Tranmission Risk Air Monitor

From Data to Decisions: Designing for Breathable Air

I led the design of the Honeywell Transmission Risk Air Monitor experience, collaborating closely with a colleague to make air quality management intuitive for schools and public spaces. The challenge was to translate complex algorithmic risk assessments into clear, actionable guidance for teachers and administrators managing busy classrooms and schools. We streamlined mobile and web workflows, onboarding, and real-time alert dashboards, transforming data into actionable insights that support healthier, safer environment. The award-winning user interface empowered educators to create safer learning environments without becoming air quality experts.
